gropdf.zig Test

by

Sven Schober

This file contains only two paragraphs of text. It can be used to verify some groff formatting properties. groff positions and alignes lines of text nicely.

This is the second paragraph. It contains a few sentences. Use mato to inspect, what groff source code results.

This is a third paragraph. It follows, that the first sentence above is a lie. Let's make this one a bit longer, so that we can see, if we do not accumulate errors along the text. I am excited to see what this will look like. I hope the result will look good and will be set beautifully. I just noticed a strange horizontal alignment issue, which vanished, when I corrected a spelling error.
